```
package com.sxt.observer;
public class ObserverA implements Observer{
 private int myState; //myState需要跟目标对象的State值保持一致
       @Override
       public void update(Subject subject) {
               myState=((ConcreteSubject).getState();
       }
       public int getMyState() {
               return myState;
       }
       public void setMyState(int myState) {
               this.myState = myState;
       }
}
```
