```
package com.sxt.templateMethod;
public class Client {
  public static void main(String[] args) {
          BankTemplateMethod btm=new DrawMoney();
          btm. process();
          //采用匿名内部类
          BankTemplateMethod btm2=new BankTemplateMethod() {
                       @Override
                       public void transact() {
                   System.err.println("我要存钱!!");
          };
          btm2.process();
}
class DrawMoney extends BankTemplateMethod{
       @Override
       public void transact() {
    System.err.println("我要取款!!");
       }
}
```
