```java
package com.sxt.mediator;

public class Macket implements Department{
        private Mediator m;

        public Macket(Mediator m) {
                this.m=m;
                m.register("Macket", this);
        }

        @Override
        public void selfAction() {
                System.err.println("跑去接项目！");
        }

        @Override
        public void outAction() {
                System.err.println("汇报工作！市场行情不好呀！");
                m.command("finacial");
        }

}
```
