```java
package com.jiang.Listener;

import javax.servlet.http.HttpSessionBindingEvent;
import javax.servlet.http.HttpSessionBindingListener;

//监听绑定和解绑
public class BeanListener implements HttpSessionBindingListener {

    //绑定
    @Override
    public void valueBound(HttpSessionBindingEvent event) {
        System.out.println("绑定:Bean对象(将Bean对象绑定到session域),绑定的对
象"+this+",sessionId"+event.getSession().getId());
    }

    //解绑
    @Override
    public void valueUnbound(HttpSessionBindingEvent event) {
        System.out.println("解绑:Bean对象(将Bean对象从session域中结解绑),解绑的对
象"+this+",sessionId"+event.getSession().getId());
    }
}
```
