```java
package com.jiang.Resource;

import org.apache.commons.dbcp.BasicDataSource;

import javax.sql.DataSource;
import java.sql.SQLException;

public class TestDBCP {

    //获取dbcp方式的ds对象
    public static DataSource getDataSourceWithDBCP(){
        BasicDataSource dbcp=new BasicDataSource();
        dbcp.setDriverClassName("oracle.jdbc.driver.OracleDriver");
        dbcp.setUrl("jdbc:oracle:thin:@localhost:1521:orcl");
        dbcp.setUsername("jiang");
        dbcp.setPassword("bjsxt");
        dbcp.setInitialSize(20);
        dbcp.setMaxActive(10);
        dbcp.setMaxIdle(20);
        dbcp.setMaxWait(5000);
        return dbcp;
    }

    public static void main(String[] args) throws SQLException {
        System.out.println(getDataSourceWithDBCP().getConnection());
    }
}
```
