```java
package com.jiang.tag.Login;

import javax.servlet.http.HttpSession;
import javax.servlet.jsp.JspContext;
import javax.servlet.jsp.JspException;
import javax.servlet.jsp.PageContext;
import javax.servlet.jsp.tagext.JspFragment;
import javax.servlet.jsp.tagext.SimpleTagSupport;
import java.io.IOException;

public class LoginTag extends SimpleTagSupport {
    @Override
    public void doTag() throws JspException, IOException {
        //判断是否登录成功
        PageContext pageContext=(PageContext) getJspContext();
        HttpSession session=pageContext.getSession();
        String name=(String)session.getAttribute("name");
        //如果成功，执行标签体
        if(name!=null){
            getJspBody().invoke(null);
        }
        //如果失败,不执行
        super.doTag();
    }
}
```
