```java
package com.jiang.Transaction;

import org.apache.commons.dbutils.QueryRunner;
import org.apache.commons.dbutils.handlers.BeanHandler;

import java.sql.Connection;
import java.sql.SQLException;

public class AccountDaoImpl implements AccountDao {
    @Override
    public Account queryAccountByCar(int cardId) {
        QueryRunner runner=new QueryRunner();
        Connection conn=JDBCUtil.getConnection();
        try {
            Account account=runner.query(conn,"select * from account where
cardid=?",new BeanHandler<Account>(Account.class),cardId);  //如果是手动提交,无
参数
            return account;
        } catch (SQLException e) {
            e.printStackTrace();
        }
        return null;
    }

    @Override
    public void updateAccount(Account account) {
      Connection conn=JDBCUtil.getConnection();
      QueryRunner runner=new QueryRunner();
        try {
            runner.update(conn,"update ACCOUNT set balance=? where
cardId=?",account.getBalance(),account.getCarId());
        } catch (SQLException e) {
            e.printStackTrace();
        }
    }
}
```
